

LE BA TRONG Data Engineer Intern

DOB: Feb 10, 2005 | **Gender:** Male **Address:** Thu Duc City, Ho Chi Minh City, Vietnam
Email: lebatrong111@gmail.com **Phone:** (+84) 825 226 120
LinkedIn: linkedin.com/in/trongleba11a **GitHub:** github.com/TrongLeBa111

Summary

Final-year student majoring in Digital Business & AI at University of Economics and Law (UEL – VNU-HCM), GPA 8.34/10. Hands-on experience architecting batch and streaming data pipelines using Python, SQL, Apache Spark, Kafka, Airflow, and dbt. Proficient in CDC ingestion, ETL/ELT workflows, dimensional modeling (Star Schema, Medallion), automated data quality testing (PyDeequ), and pipeline observability. Seeking a **Data Engineer Intern** position to build robust, scalable data platforms.

Technical Skills

- **Programming & Data Processing:** Python (pandas, SQLAlchemy), SQL (Window functions, CTEs), Apache Spark
- **Data Engineering & Pipelines:** ETL/ELT, Batch & Streaming Processing, CDC (Debezium WAL), Apache Kafka, Apache Airflow, dbt Core
- **Data Warehouse & Modeling:** PostgreSQL, MotherDuck, Star Schema, Medallion Architecture (Bronze/Silver/Gold), SCD Type 1/2/3
- **Quality, Monitoring & Infra:** PyDeequ, dbt data tests, Grafana, PagerDuty, Docker, MinIO, Parquet, Git, CI/CD (GitHub Actions)

Experience

Data Engineering Practicum Student — ShopBack Apr 2026 – Jul 2026
Corporate Practicum Program

- Built an event-driven CDC pipeline from PostgreSQL via Debezium WAL and Kafka, streaming records through Apache Spark into MinIO Parquet storage.
- Deployed automated data quality testing via PyDeequ across 4 mission-critical tables, asserting primary keys, uniqueness, and value domains before downstream handoff.
- Integrated Grafana and PagerDuty to track CDC replication lag, monitor pipeline health, and trigger automated alerts upon ingestion failures.

Key Projects

Agricultural Data Warehouse & Automated Pipeline Apr 2026 – Aug 2026
Data Warehouse & Integration Coursework

- Designed a 3-tier pipeline (Bronze → Silver → Gold) on MotherDuck and PostgreSQL, processing 650k+ commodity price records using dbt incremental models.
- Architected a Star Schema with `fact_daily_prices` and 5 dimension tables (incorporating SCD Type 2); configured 16 automated dbt tests ensuring referential integrity and business rules.
- Orchestrated daily Airflow DAGs (ingest → dbt run → dbt test → ML scoring) with GitHub Actions CI/CD; engineered lag-feature extraction feeding an LSTM forecast model (MAPE 1.12–1.55%).

E-commerce End-to-End Analytics Pipeline Dec 2025 – Jun 2026
Personal Project

- Normalized 650k+ transactions into a PostgreSQL Star Schema (`fact_orders` 1.2M rows, 5 dimensions) via dbt; applied SCD Type 1/2/3 and 16 automated tests to populate analytical data marts.
- Trained a LightGBM churn prediction model (ROC-AUC 0.738) on 99k+ users, writing predictions back to the warehouse; uncovered that 97% of users are one-time buyers and delivery delays (> 14 days) degrade ratings from 4.2 to 3.1 stars.

Education

University of Economics and Law (UEL) – VNU-HCM Graduation: Jun 2027
Bachelor of Business Information Management – Digital Business & AI
GPA: 8.34/10 | **Core Coursework:** Data Warehouse & Integration, Database Management Systems, Machine Learning, Systems Analysis & Design

Certifications & Training

- Google Data Analytics Professional Certificate (Coursera, 2026) | Google Generative AI Essentials (2026)
- TOEIC Reading & Listening – 640 (2025)
